

BP North Sea HQ Aberdeen

Project:
BP North Sea HQ

Location:
Aberdeen

M&E Contractor:
Bailey

Completion:
November 2007

TREND automatic controls for 17,400m² of Office Space split into four wings and connected via a 1,330m² Naturally Ventilated Atrium. The office areas are conditioned using a displacement ventilation system to maximise the free cooling potential of Aberdeen's climate.

Heating is served by Boilers and a CHP set, and the BMS also controls load shedding across the building for the two 800KVA Standby Generators.
